

OMKAR WARGHADE

Senior Software Engineer | Java & Spring Boot | AI-Augmented Engineering

Pune, Maharashtra, India | +91 8668757860 | omkar.mangeshw@gmail.com | linkedin.com/in/omkrw

PROFESSIONAL SUMMARY

Senior Backend Engineer with 6+ years building scalable, high-availability systems across Banking, FinTech, Healthcare, and E-commerce. Deep expertise in Java 17, Spring Boot 3, Microservices, REST APIs, and cloud-native architecture on GCP, paired with hands-on experience integrating AI into the SDLC using Spring AI, Claude Code, MCP, and prompt engineering to raise engineering velocity and code quality. Proven record of cutting latency, driving test coverage above 95%, and modernizing legacy platforms for Fortune-500 and enterprise clients.

CORE SKILLS

Languages	Java 8 / 11 / 17 / 21, SQL
Frameworks	Spring Boot, Spring AI, Hibernate, JPA, Microservices, REST APIs
Cloud & DevOps	Google Cloud Platform (GCP), Pivotal Cloud Foundry (PCF), Docker, Jenkins, GitLab CI
Databases	Oracle, MySQL, PostgreSQL, DB2, H2
AI Engineering	Claude, Claude Code, MCP (Model Context Protocol), GitHub Copilot, Prompt Engineering, RAG, pgvector
Testing & Quality	JUnit, Mockito, SonarQube, TDD

PROFESSIONAL EXPERIENCE

Citicorp Services India Ltd. (Citibank)	Officer – Application Programmer	Feb 2026 – Present
Migrated automated integration test suites from DB2 to H2, cutting local test execution time and accelerating the developer feedback loop across the team. Improved code health by systematically resolving SonarQube code smells, security vulnerabilities, and technical debt to meet enterprise banking compliance standards. Raised unit test coverage by building comprehensive JUnit and Mockito suites, strengthening release reliability and long-term maintainability. Accelerated delivery by embedding Claude Code and GitHub Copilot into daily workflows for debugging, refactoring, and test generation, measurably reducing turnaround on routine engineering tasks. Delivered backend features in Java 17, Spring Boot, and Spring AI across Oracle, DB2, and H2 in close collaboration with cross-functional QA and product teams.		
Mastercard	Software Engineer II	Jan 2024 – Jan 2026
Reduced API response latency by 25% through targeted database query optimization and backend processing improvements on high-throughput payment services. Authored microservice architecture and workflow diagrams that became the team's reference documentation, improving onboarding and cross-team system understanding. Resolved production defects under time pressure, improving platform stability and end-user experience for mission-critical payment flows. Adopted AI coding assistants (Claude Opus, Claude Sonnet, Google Gemini) to speed up development, elevate code quality, and support complex technical problem-solving. Partnered with engineering and product stakeholders to ship scalable backend services on an Agile cadence.		
Eshopbox	SDE II	Jul 2023 – Jan 2024
Owned design and delivery of key enhancements to the enterprise payment platform, shipping scalable and maintainable backend solutions. Built BigQuery synchronization that materially reduced database costs and operational overhead while improving backup efficiency. Developed high-volume data sync workflows on GCP and Google App Engine to support enterprise payment processing at scale. Integrated the Zoho Chatbot into the payment platform, improving customer engagement and support automation.		
Wissen Technology (Morgan Stanley)	Software Engineer	May 2022 – Jul 2023

- **Modernized legacy Java applications** by migrating and refactoring codebases into maintainable, scalable services.
- **Built comprehensive unit test suites** for legacy modules, materially improving code quality and reliability.
- **Designed and maintained multiple RESTful APIs** following clean architecture and industry best practices.
- **Collaborated** with stakeholders under Agile methodologies to deliver high-quality backend services.

Tata Consultancy Services (TCS) | System Engineer — Client: Cardinal Health

Aug 2020 – May 2022

- **Designed scalable RESTful APIs** for Cardinal Health supporting inventory management, logistics, and core healthcare business processes.
- **Achieved 97% unit test coverage** using JUnit-based automated test suites, ensuring high code quality and reliability.
- **Integrated RabbitMQ and webhook-based messaging** to enable asynchronous processing and seamless external system integration.
- **Collaborated** with business analysts and QA engineers to deliver enterprise applications under Agile methodologies.

FLAGSHIP AI PROJECTS

Enterprise Confluence AI Assistant

- Built a RAG-powered enterprise knowledge assistant using Spring AI, Claude, MCP, pgvector, and Confluence APIs to surface institutional knowledge on demand.

AI Code Review Platform

- Integrated GitHub APIs with Claude Code to automate code review, flag security vulnerabilities, and generate unit-test recommendations.

Production Log Analyzer

- Built an AI-driven platform using Spring AI and Claude to parse production logs, identify root causes, summarize stack traces, and recommend fixes.

CERTIFICATIONS

Claude 101 • Claude Code 101 • Claude Code in Action • Introduction to MCP • Microservices Software Architect • Prompt Engineering

EDUCATION

Bachelor of Engineering, Information Technology — Savitribai Phule Pune University (SPPU)

JSPM's Rajarshi Shahu College of Engineering, Pune, Maharashtra

August 2016 – May 2020 | CGPA: 8.17 / 10
